

Rotate 7-digit number to right by three

↳

$$\begin{aligned} n &= 1234567 \\ &= 5671234 \end{aligned}$$

$$\text{rem} = n \% 1000 \quad // \underline{\underline{567}}$$

$$n = n / 1000 \quad // \underline{\underline{1234}}$$

$$\begin{aligned} \text{Ans} &= \text{rem} * 10000 + n \\ &= \underline{(5670000)} + (1234) \end{aligned} \quad (5671234)$$

code

```
public static void main(String[] args) {  
    Scanner scn = new Scanner(System.in);  
    int t = scn.nextInt();  
    for (int i = 0; i < t; i++) {  
        int n = scn.nextInt();  
        System.out.println(rotate(n));  
    }  
}  
public static int rotate(int n) {  
    int rem = n % 1000;  
    n = n / 1000;  
  
    return ( rem * 10000 + n );  
}
```

Print all factors of a number

```
public static void main(String[] args) {  
    Scanner scn = new Scanner(System.in);  
    int n = scn.nextInt();  
  
    printFactors(n);  
}  
public static void printFactors(int n) {  
  
    for (int i = 1; i <= n; i++) {  
        if ( n % i == 0 ) {  
            System.out.println(i);  
        }  
    }  
  
}
```

⇒ Arrays (M.M. Imp)

↳ a collection of similar type of data type

arr
(int)

| | | | | | | | |
|---|---|---|---|---|----|------|---|
| 5 | 3 | 7 | 4 | 0 | -5 | -100 | 3 |
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

Syntax

data-type [] array-name = new data-type[size];

↳ int[] arr = new int[5];

| | | | | |
|---|---|---|---|---|
| 0 | 0 | 0 | 0 | 0 |
| 0 | 1 | 2 | 3 | 4 |

Note:- In java, default values of array is always going to zero.

```
int[] arr = new int[5];
```

| | | | | |
|-----|---|---|---|---|
| 100 | 0 | 3 | 0 | 0 |
| 0 | 1 | 2 | 3 | 4 |

└──────────────────┘

```
arr[2] = 3; // arr[2] = scn.nextInt();
```

```
arr[0] = 100; // upgradation
```

// arr[5] → exception: array index out of bound

```
int a = arr[4]; // 0 // get the value
```

Note:- In String: str.length(); In array: arr.length; // 5

n = 5

arr

| | | | | |
|---|---|----|----|----|
| 3 | 4 | 10 | -2 | -4 |
| 0 | 1 | 2 | 3 | 4 |

↓
arr[0] = 3

arr[1] = 4

arr[2] = 10

arr[3] = -2

arr[4] = -4

↪ arr[0];
↪ arr[1];
↪ arr[2];
↪ arr[3];
↪ arr[4];

Print the array elements linewise

code

```
public static void main(String[] args) {  
    Scanner scn = new Scanner(System.in);  
    int n = scn.nextInt();  
    int[] arr = new int[n];  
    for (int i = 0; i < n; i++) {  
        arr[i] = scn.nextInt();  
    }  
    printArray(arr);  
}  
  
public static void printArray(int[] arr) {  
    for (int i = 0; i < arr.length; i++) {  
        System.out.println( arr[i] );  
    }  
}
```

Note:- 'i' is index & arr[i] is value

Print Alternate Array Elements Linewise

$n = 5$

arr

| | | | | |
|-----|---|---|----|----|
| 100 | 5 | 3 | -2 | -4 |
| 0 | 1 | 2 | 3 | 4 |

↑ ↑ ↑

code

```
public static void main(String[] args) {  
    Scanner scn = new Scanner(System.in);  
    int n = scn.nextInt();  
    int[] arr = new int[n];  
    for (int i = 0; i < n; i++) {  
        arr[i] = scn.nextInt();  
    }  
  
    printAlternate(arr, n);  
}  
  
public static void printAlternate(int[] arr, int n) {  
    for (int i = 0; i < n; i += 2) {  
        System.out.println( arr[i] );  
    }  
}
```

Print Array Elements Reverse linewise

$n = 5$

arr

| | | | | |
|-----|---|---|----|----|
| 100 | 5 | 3 | -2 | -4 |
| 0 | 1 | 2 | 3 | 4 |

```
public static void main(String[] args) {
    Scanner scn = new Scanner(System.in);
    int n = scn.nextInt();
    int[] arr = new int[n];
    for (int i = 0; i < n; i++) {
        arr[i] = scn.nextInt();
    }
    printReverse(n, arr);
}

public static void printReverse(int n, int[] arr) {
    for (int i = n - 1; i >= 0; i--) {
        System.out.print(arr[i] + " ");
    }
}
```

Print Array element if index divisible by 3

```
public static void main(String[] args) {
    Scanner scn = new Scanner(System.in);
    int n = scn.nextInt();
    int[] arr = new int[n];
    for (int i = 0; i < n; i++) {
        arr[i] = scn.nextInt();
    }
    printArray3(n, arr);
}

public static void printArray3(int n, int[] arr) {
    for (int i = 0; i < n; i += 3) {
        System.out.print( arr[i] + " " );
    }
}
```

Check if two arrays are identical?

i

| | | | | | | | | |
|------------|---|---|---|---|---|---|---|---|
| | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| (int) arr1 | 1 | 2 | 5 | 4 | 3 | 6 | 7 | 8 |

(8)

| | | | | | | | | |
|------------|---|---|---|---|---|---|---|---|
| | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| (int) arr2 | 1 | 2 | 3 | 4 | 7 | 6 | 3 | 8 |

(8)

for 2 arrays to be identical

↳ both array need to be of same size

↳ both array should contain same values at same index

code

```
public static void main(String[] args) {
    Scanner scn = new Scanner(System.in);
    int n = scn.nextInt();
    int[] arr1 = new int[n];
    for (int i = 0; i < n; i++) {
        arr1[i] = scn.nextInt();
    }

    int m = scn.nextInt();
    int[] arr2 = new int[m];
    for (int i = 0; i < m; i++) {
        arr2[i] = scn.nextInt();
    }

    System.out.println(isIdentical(arr1, arr2));
}

public static boolean isIdentical(int[] arr1, int[] arr2) {

    if ( arr1.length == arr2.length ) {
        for (int i = 0; i < arr1.length; i++) {
            if ( arr1[i] != arr2[i] ) {
                return false;
            }
        }
        return true;
    } else {
        return false;
    }
}
```
